MULTI-LANGUAGE INTERFACE FOR INTERACTIVE ONLINE GAMING SYSTEMS

5   ABSTRACT OF THE DISCLOSURE
            An online communications system for converting language.
The language conversion is achieved by first storing words and
phrases corresponding to a language key and a unique key value
in a table at both the transmit and receive ends of the
10   communication. The computer located at the transmit end receives
and converts the word or phrase into the unique key value and
transmits the unique key value to the computer at the receiving
end. The computer at the receiving end receives and converts the
unique key value into the corresponding word or phrase.
